Quick Planting Ideas

HAPPY HAIR
GROWING GRASS SEED

Carrots in a Bottle

How to sprout

1
Pick out the good seeds and put them in the tray. Soak the seeds in water.

2
After soaking, put the seeds on the grid tray evenly. Don't stack them.

3
Add water into the container, the water can't come up to the grid tray. Don't submerge seeds in the water, otherwise it'll rot. To avoid breeding bacteria and odour, pls change water for 1~2 times every day.

4
If the tray without lid, cover it with paper or cotton gauze. To avoid breeding bacteria and odour, please change water for 1~2 times every day.

5
When the buds grow to 1cm height, open the cover. Sprinkle water for 3~5 times every day.

6
The seeds germination time varies from 3 to 10 days. Before harvested, put them in sunlight for 2~3 hrs to increase chlorophyll.

BECOME A SPONSOR OF A WATER BLAST STATION.
